

CRUSHER REPAIRS

THE GENUINE ALTERNATIVE - SETTING THE STANDARD

Dedicated fully equipped Crusher Repair Centre with our own factory trained engineers.

50 tonne overhead craneage to lift the largest Jawstocks & Crusher Frames.

We have the full range of hydraulic bearing withdrawal tools to prevent damage during removal.

Jawstock & Frame bores are checked to factory tolerance with workshop in-line re-boring facilities if required.

All parts are cleaned, inspected & retained for customer inspection.

Eccentric shafts undergo testing to establish suitability for re-use incl. dye penetrant crack testing & straightness checks on a lathe.

Full inspection report completed on stripping & rebuild incl. recording of roller bearing clearances.

OEM specified bearings prepared using dedicated branded bearing induction heaters.

Special branded bearing mounting tools employed for ease of fitting.

Shafts assembled in clean environment & bearings greased with quality branded lubrication.

Crushers rebuilt by our own factory trained engineers & test run.
